Power Query Transformations

Add a new cusrtom columns in prod_Churn table

1. Churn Status = if [Customer_Status] = "Churned" then 1 else 0
2. Change Churn Status data type to numbers
3. Monthly Charge Range = if [Monthly_Charge] < 20 then "< 20" else if [Monthly_Charge] < 50 then "20-50" else if [Monthly_Charge] < 100 then "50-100" else "> 100"

Create a New Table Reference for mapping_AgeGrp

1. Keep only Age column and remove duplicates
2. Age Group = if [Age] < 20 then "< 20" else if [Age] < 36 then "20 - 35" else if [Age] < 51 then "36 - 50" else "> 50"
3. AgeGrpSorting = if [Age Group] = "< 20" then 1 else if [Age Group] = "20 - 35" then 2 else if [Age Group] = "36 - 50" then 3 else 4
4. Change data type of AgeGrpSorting

Create a new table reference for mapping_TenureGrp

1. Keep only Tenure_in_Months and remove duplicates
2. Tenure Group = if [Tenure_in_Months] < 6 then "< 6 Months" else if [Tenure_in_Months] < 12 then "6-12 Months" else if [Tenure_in_Months] < 18 then "12-18 Months" else if [Tenure_in_Months] < 24 then "18-24 Months" else ">= 24 Months"
3. TenureGrpSorting = if [Tenure_in_Months] = "< 6 Months" then 1 else if [Tenure_in_Months] = "6-12 Months" then 2 else if [Tenure_in_Months] = "12-18 Months" then 3 else if [Tenure_in_Months] = "18-24 Months " then 4 else 5
4. Change data type of TenureGrpSorting

Create a new table reference for prod_Services table

1. Unpivot services columns

After unpivoting I have two columns Attribute and Values

2. Rename Column –
    a. Attribute >> Services
    b. Value >> Status

Summary Page - Measures

Total Number of Customers = COUNT(prod_churn[Customer_ID])

Total Number of Churn = CALCULATE(COUNT(prod_churn[Customer_ID]), prod_churn[Churn_Status] = 1)

New Joiners = CALCULATE(COUNT(prod_churn[Customer_ID]), prod_churn[Customer_Status] = "Joined")

AVG Churn per Customer (Churn Rate) = [Total Number of Churn] / [Total Number of Customers]

Churn Prediction Page - Measures

Count Predicted Churner = COUNT(Predictions[Customer_ID]) + 0

Title Predicted Churners = "COUNT OF PREDICTED CHURNERS : " & COUNT(Predictions[Customer_ID])
